Labor Operations

Major service for time. Spark plugs recent, so was air filter. Neither were changed. Use oil and filter supplied by owner. Including adjust valves, torque cylinder heads, replace all belts, timing belt tensioner bearings and cam seals. Replace all fluids and oil filter. Tune motor, recharge A/C, tighten suspension fasteners. Inspect entire car with particular attention paid to tires, brakes, suspension and steering. Correct tire pressures, adjust parking brake, test exterior lights and test drive.

Amount

\$6,350.00

Install Newman differential housing supplied by owner. With no changes in shims the preload on carrier bearings is far too tight and There is no backlash. Remove, reinstall carrier 4 times and remove carrier bearing cones 4 times to get proper preload and backlash.

\$3,100.00

Remove broken drain plug from right cylinder head. Every drain plug in car overtightened and a sealant was used. Plugs in heads so tight the threads were damaged. I removed the broken off plug and repaired the threads on both sides but great care needs to be taken to get plugs started in threads. Threads very weak due to being over tightened. Plug repair failed pressure test. I had to redrain system, use sealant on plugs. Refill and repressure test. Right head drain still leaks. Drain system again. Order longer generic metric plugs and install. Refill and repressure test. Finally passes pressure test.

\$900.00

I hereby authorize the above work to be done along with the necessary material and hereby grant you and or your employees permission to operate the vehicle herein described for the purpose of testing and or inspection. An express mechanics lien is hereby acknowledged on this vehicle to secure the amount of repairs thereto. You will not be held responsible for loss or damage to the vehicle or items

left in vehicle in case of fire or theft or any other cause beyond our control.

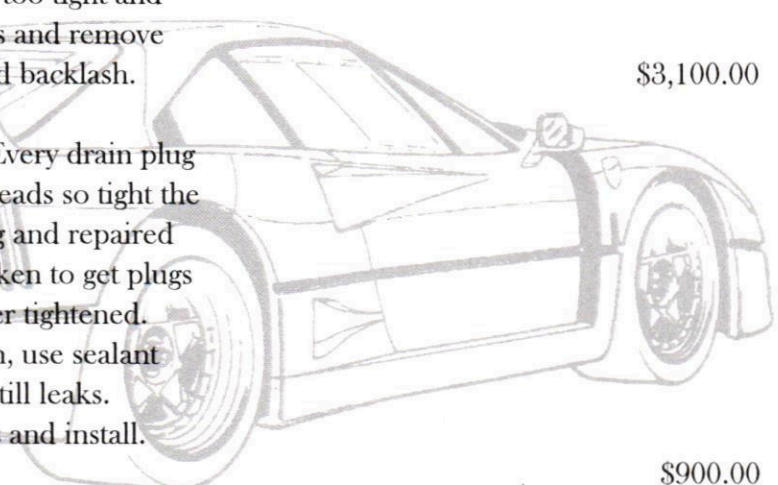

Signed X

Labor Operations

Amount

Excessive amounts of sealant used on valve covers and cam seal housings. It was used in many areas no sealant is supposed to be used. It took a considerable amount of time to clean it all off prior to reassembly. Sealant was used on cam sprocket bolts getting silicone sealant inside oil pressurized cams. A pice of sealant in cam oiling system has caused the failure of many of these engines and needs to be cleaned out. Clean sealant from cams.

\$600.00

Still has original evap hoses in engine bay. Replace 4 hoses in front of engine from tanks to pipe.
Still has original fuel tank air vent hoses in front of engine. Replace.

Incl.
Incl.

Car was converted to run R134a refrigerant in the AC system. I do not consider this a good idea and have no idea why it was done. The system will not work as well and the hoses are not built to properly contain it. I was planning on refilling with R12 but the system was filled with an incompatible oil. It would have required draining and flushing the compressor, flushing the rest of the system and replacement of the dryer. For the sake of keeping as close as possible to the estimate I chose to refill with R134a. I did test the entire compressor area for leakage and found none.

Repair threads at right bank thermocouple. Damaged from overtightening and flared end so would not go back together.

\$50.00
